# Thank you for downloading our Revit collection or library!

- *The text files*
  - Most of our products have standard sizing so don't forget to save the TXT file with the same name to the same location on your computer!
    - Some products that do not have standard sizing:
      - The Signature Modern series
      - Specialty shapes or Direct Glaze products
    - Custom sizing is available and the family can be adjusted after being loaded into your project
- *Material families*
  - Contain exterior color options which can be accessed with door or window Edit Type
- *Loading a family*
  - Load the family from your open Revit project (RVT)
  - Go to the Insert tab and select Load Family (image below)
  - Browse to the RFA file on your computer and "Open"
  - Select standard size/Type from the listing provided there was a text file associated with the family
- *Working in your project*
  - Once the family is your project, it will be located in the Project Browser in either the Doors or Windows category
  - Double-click the Type or drag and drop it into a wall, highlight it and Edit Type from the Properties screen
  - Adjust lite cut, finish, glazing, operation, configuration, casing, sill type, sizing…
  - Please check min/max sizing and assembly availability with your local rep or dealer

  - Assembly disclaimer in Properties
    - Please note that assembly availability must be verified with your local rep
  - Detail families
    - Native Revit detail families are available for Modern, skylights, Skycove and some Ultimate products
    - Look for a folder labeled Details in the Collection or Library ZIP
